SESSION DESCRIPTION:
[The Information Technology is becoming a significant part of each sector in every dimension in order to digitalize everything and makes it smoother for human to perform/ work/ make-decisions with more reliable results/ outcomes received from smart systems. Among all the sectors as per the current scenario of 'Medical Sciences' the role of Information Technology is on peek and regular advancements/ innovations still going on because of the importance of this particular sector as well as to make it negligible the chances of errors/ discrepancies in medical results concluded with the help of smart healthcare technologies/ systems. To provide a high level security and to make it sure the authentic results will be used for any type of decision making either by physician itself or by the

smart devices (immediately for patients due to unavailability of doctors) the advent technology known as 'Blockchain' can be used. The Block-Chain not only utilizes high quality cryptographic algorithms such as 'Hash-Function' for proving the authenticity but also helpful to keep the records available on many local / remote locations for clarification or updation purpose if required with the help of consensus, smart-contract and proof of work. This particular session provides an interactive forum for Academicians, Research-Scholars, Industry-Persons and Medical-Practitioners to share their conceptions and new innovative techniques**]**
